

A. Applying the EMS standards to protect environment

Continuously applying the environmental approach in all areas of our activity and consider it as a key issue of next development.

B. Respecting valid legislation and customers' requirements

In relation with the environment, co-operating with authorities, ensuring their awareness as well as the awareness of public, colleagues, customers and suppliers including communication of the achieved results. Respecting the European, Czech and customers' policies for the environmental protection, legitimate internal and external observations and not to use material that contains excess amount of prohibited substances.

C. Continuously reducing the negative effects of activities on the environment

Reducing the energy, material and raw material demands of manufacturing by means of modernization of production, maximum use of resources by its sustainable and effective management, waste and pollution reduction, and thereby minimized drawing the natural resources. In the areas of collection and handling of waste ensuring its safe handling.

D. Increasing the energy efficiency of processes and the share of renewable energy

Making the maximum effort when implementing the tools for increasing of energy efficiency to increase an energy efficiency of processes with significant effect on the reduction of energy consumption in all their forms. Consciously and systematically supporting a procurement of low-powered products and services and supporting new concepts how to reduce the energy consumption. Working on reduction of CO₂ emission and where possible, increasing the share of renewable energy.

E. Continuously and targeted educating the employees about environmental protection

Motivating all of us to observe environmental discipline.

F. Monitoring, verifying and continuously improving the EMS

All with an emphasis on preventing the generation of waste and pollution of the environment. The results are to be continuously analysed, reviewed by the company top-management and relevant corrective and preventive actions, that shall lead to the continuous improvement of environmental protection in the enterprises of the PLASTIKA Group, are to be taken.
